Chapter 1

Chapter heading here

1.1 Section heading here

You can say stuff, including math: $x^2 - 1 = 0$.

That's a paragraph break.

Jupyter-Viz is how you reference package names and `StubForTesting` (1.1.1) is how you reference functions. You can also insert man page sections.

1.1.1 StubForTesting

▷ `StubForTesting(`k`)` (function)

This function adds 5 to its input. That's all.

```
──────────────────────── Example ────────────────────────
gap> StubForTesting(100);
105
```

See the docs for other XML tags you can use.
